Concepts of Mathematics and Physics Course Description This is the suggested course sequence that allows one core area of science to be studied per semester. You can change the sequence of the semesters per the needs or interests of your student; materials for each semester are independent of one another to

allow flexibility. Semester 1: Mathematics Numbers surround us. Just try to make it through a day without using any. It's impossible: telephone numbers, calendars, volume settings, shoe sizes, speed limits, weights, street numbers, microwave timers, TV channels, and the list goes on and on. The many advancements and branches of mathematics were developed through the centuries as people encountered problems and relied upon math to solve them. It's amazing how ten simple digits can be used in an endless number of ways to benefit man. The development of these ten digits and their many uses is the fascinating story in Exploring the World of Mathematics.

Semester 2: Physics Physics is a branch of science that many people consider to be too complicated to understand. John Hudson Tiner puts this myth to rest as he explains the fascinating world of physics in a way that students can comprehend. Did you know that a feather and a lump of lead will fall at the same rate in a vacuum? Learn about the history of physics from Aristotle to Galileo to Isaac Newton to the latest advances. Discover how the laws of motion and gravity affect everything from the normal activities of everyday life to launching rockets into space. Learn about the effects of inertia firsthand during fun and informative experiments. Exploring the World of Physics is a great tool for students who want to have a deeper understanding of the important and interesting ways that physics affects our lives. Course Description: Taking Back Astronomy: Take a breathtaking look at the universe in this comprehensive guide to the heavens! Sit back and explore the world at your fingertips. This book explains the scale and size of the universe that is hard for our minds to imagine, yet can only indicate the Master's hand at work. Marvel at over 50 full-color, rarely seen photos of stars, nebulas, and galaxies. Study the facts that challenge secular theories and models of the universe-how it began and how it continues to amaze the scientific community. Explore numerous evidences that point to a young universe: magnetic poles of planets, the spiral shape of galaxies, comets and how long scientists think they can last, and much more. Step out among the stars and experience the truly awesome power of God through this glimpse of His vast creation. Our Created Moon: For eons the moon has intrigued humanity. From its creation through the current issues of space exploration the moon has been both a light in the night and a protective shield of earth placed perfectly by God, regulating our seasons and keeping our atmosphere purified. Billions of dollars have been spent to reach its surface and discover its secrets; open these pages and discover those secrets for yourself. The Stargazer's Guide to the Night Sky: Explore the night sky, identify stars, constellations, and even planets. Stargaze with a telescope, binoculars, or even your naked eye. Allow Dr. Jason Lisle, a research scientist with a masters and PhD in astrophysics, to guide you in examining the beauty of God's Creation with 150 full color star-charts. Learn the best ways and optimal times to observe planets and stars with easy to use illustrations. Create or expand the hobby of stargazing; an outdoor, educational hobby to enjoy with friends or family. Our Created Moon DVD: In this illustrated presentation, Dr. Don DeYoung looks at four of the most popular ideas evolutionists have to offer regarding the moon's origin, and logically concludes that this "lesser light" could only have been placed in its orbit by an all-knowing, all-powerful Creator. Created Cosmos DVD: Our universe is truly an amazing thing. The vastness of space boggles the mind, and the beauty of diversity we find there points to a Creator. The Psalmist wrote, "When I consider Your heavens, the work of Your fingers, the moon and the stars, which You have ordained, what is man that You are mindful of him, and the Son of man that You visit him?" Take a tour through the universe during this awe-inspiring presentation. Lesson Planner Weekly Lesson Schedule Student Worksheets Quizzes & Test Answer Key 7th - 9th grade 1 Year Science 1/2 Credit Features: Each suggested weekly schedule has three easy-to-manage lessons which combine reading, worksheets, and vocabulary-building opportunities including an expanded glossary for each book. Designed to allow your student to be independent, materials in this resource are divided by section so you can remove quizzes, tests, and answer keys before beginning the coursework. As always, you are encouraged to adjust the schedule and materials as you need to in order to best work within your educational program. Workflow: Students will read the pages in their book and then complete each section of the study guide worksheets. Tests are given at regular intervals with space to record each grade. Younger students may be given the option of taking open book tests. Lesson Scheduling: Space is given for assignment dates. There is flexibility in scheduling. For example, the parent may opt for a M-W schedule rather than a M, W, F schedule. Each week listed has five days but due to vacations the school work week may not be M-F. Please adapt the days to your school schedule. As the student completes each assignment, he/she should put an "X" in the box. Survey of Science History & Concepts Course Description Students will study four areas of science: Scientific Mathematics, Physics, Biology, and Chemistry. Students will gain an appreciation for how each subject has affected our lives, and for the people God revealed wisdom to as they sought to understand Creation. Each content area is thoroughly explored, giving students a good foundation in each discipline. Semester 1: Math and Physics Numbers surround us. Just try to make it through a day without using any. It's impossible: telephone numbers, calendars, volume settings, shoe sizes, speed limits, weights, street numbers, microwave timers, TV channels, and the list goes on and on. The many advancements and branches of mathematics were developed through the centuries as people encountered problems and relied upon math to solve them. It's amazing how ten simple digits can be used in an endless number of ways to benefit man. The development of these ten digits and their many uses is the fascinating story in Exploring the World of Mathematics. Physics is a branch of science that many people consider to be too complicated to understand. John Hudson Tiner puts this myth to rest as he explains the fascinating world of physics in a way that students can comprehend. Did you know that a feather and a lump of lead will fall at the same rate in a vacuum? Learn about the history of physics from Aristotle to Galileo to Isaac Newton to the latest advances. Discover how the laws of motion and gravity affect everything from the normal activities of everyday life to launching rockets into space. Learn about the effects of inertia first hand during fun and informative experiments. Exploring the World of Physics is a great tool for student who want to have a deeper understanding of the important and interesting ways that physics affects our lives. Semester 2: Biology and Chemistry The field of biology focuses on living things, from the smallest microscopic protozoa to the largest mammal. In this book you will read and explore the life of plants, insects, spiders and other arachnids, life in water, reptiles, birds, and mammals, highlighting God's amazing creation. You will learn about biological classification, how seeds spread around the world, long-term storage of energy, how biologists learned how the stomach digested food, the plant that gave George de Mestral the idea of Velcro, and so much more. For most of history, biologists used the visible appearance of plants or animals to classify them. They grouped plants or animals with similar-looking features into families. Starting in the 1990's, biologists have extracted DNA and RNA from cells as a guide to how plants or animals should be grouped. Like visual structures, these reveal the underlying design of creation. Exploring the World of Biology is a fascinating look at life-from the smallest proteins and spores, to the complex life systems of humans and animals. Chemistry is an amazing branch of science that affects us every day, yet few people realize it, or even give it much thought. Without chemistry, there would be nothing made of plastic, there would be no rubber tires, no tin cans, no televisions, no microwave ovens, or something as simple as wax paper. This book presents an exciting and intriguing tour through the realm of chemistry as each chapter unfolds with facts and stories about the discoveries of discoverers. Find out why pure gold is not used for jewelry or coins. Join Humphry Davy as he made many chemical discoveries, and learn how they shortened his life. See how people in the 1870s could jump over the top of the Washington Monument. Exploring the World of Chemistry brings science to life and is a wonderful learning tool with many illustrations and biographical information. Sharpen your skills and reinforce what you've learned with this engaging companion to the latest edition of RADIOLOGIC SCIENCE FOR TECHNOLOGISTS. Whether used for homework or in-class assignments, this valuable resource is your perfect study and practice guide. A variety of unique worksheets, crossword puzzles, lab experiments, and mathematic exercises help you learn by doing and provide the scientific understanding and practical experience necessary to become an informed, confident radiographer.
