Special edition of the Federal Register, containing a codification of documents of general applicability and future effect ... with ancillaries. Although polls of Hispanic youth show a strong propensity to serve in the military, Hispanics are nonetheless underrepresented among military recruits. The authors discuss the major characteristics that disproportionately disqualify Hispanic youth and explore actions that could be taken to increase Hispanic enlistments. Volumes for 1950-19 contained treaties and international agreements issued by the Secretary of State as United States treaties and other international agreements. An ongoing concern of Congress, the U.S. Department of Defense (DoD), and the armed services is the social representation of the military, particularly of active duty accessions. Hispanics are a growing segment of the youth population yet have been underrepresented historically among military accessions. The widely cited reason is their below-average rate of graduation from high school and the services' preference for diploma graduate recruits. But other less-studied factors may contribute. These other possible factors may include lack of language proficiency as reflected in their applicant aptitude test scores, fertility choices, health factors such as obesity, and involvement in risky activities such as the use of illegal drugs. These factors could adversely affect the ability of some Hispanic youth to meet service enlistment standards. The RAND Corporation project 3Hispanic Youth in the United States and the Factors Affecting Their Enlistment⁴ is conducting an analysis of the factors that lead to the underrepresentation of Hispanic youth in the military. This documented briefing summarizes interim results from the research effort²s first year. First, it highlights the various enlistments standards recruits must meet in each branch of

service. Then using available data on American young adults, it summarizes the degree to which Hispanic youth qualify for service relative to youth who are members of other racial and ethnic groups. This documented briefing is intended for individuals interested in military recruiting and in the population representation of personnel in the armed forces. The issue of how patents impact medicine has increased in significance within the last decade. The book provides an explanation of the current international infrastructure and explains how competing patent perspectives play a thus far unacknowledged role in promoting distortion and confusion. The Code of Federal Regulations Title 21 contains the codified Federal laws and regulations that are in effect as of the date of the publication pertaining to food and drugs, both legal pharmaceuticals and illegal drugs. The Code of Federal Regulations is a codification of the general and permanent rules published in the Federal Register by the Executive departments and agencies of the United States Federal Government. Slides of selected tables, graphics, and maps from book. Some vols. include supplemental journals of "such proceedings of the sessions, as, during the time they were depending, were ordered to be kept secret, and respecting which the injunction of secrecy was afterwards taken off by the order of the House." Despite being an important legal instrument in the law of the WTO, the waiver has hitherto been the subject of little scholarly analysis. Isabel Feichtner fills this gap by challenging the conventional view that the WTO's political bodies do not engage in significant law-making. She systemises the GATT and WTO waiver practice and suggests a typology of waivers as individual exception, general exception and rule-making instruments. She also presents the procedural and substantive legal requirements for the granting of waivers, deals with questions of judicial review and interpretation of waiver decisions, and clarifies the waiver's potential and limits for addressing the need for flexibility and adaptability in public international law and WTO law in particular. By connecting the analysis of waiver competence and waiver practice to the general stability/flexibility challenge in public international law, the book sheds new light on the WTO, international institutions and international law.

Aeromedical psychology is that branch of psychology pertaining to the assessment, selection and evaluation of aviation personnel. This book, *Aeromedical Psychology*, is designed to provide the means for a variety of clinicians to carry out sound assessment and selection procedures, perform informed evaluations and make subsequent recommendations regarding flight status and treatment strategies geared to the aviation environment. To facilitate a dynamic understanding of the field, the book emphasizes an integration of applications and theory, case examples and research. The book is divided into three parts. The first presents assessment and selection procedures for aviation personnel (i.e. air traffic controllers, flight officers and pilots) and astronauts and the many ways in which both psychologists and psychiatrists are involved in these roles. In the second part, the waiver standards put forth by both the FAA and the various branches of the military are presented, as well as the waiver decision process. Clinical issues unique to aviation - notably fear of flying, motivation to fly and airsickness - are addressed, as well as possible courses of intervention, treatment and disposition. In the final part, more specialized issues pertaining to aeromedical psychology are dealt with, namely the psychopharmacological research and regulations applicable to recreational pilots and aviation personnel, managing the aftermath of aviation mishaps and the psychologist's role in accident investigations. The U.S. Department of Defense (DoD) faces short-term and long-term challenges in selecting and recruiting an enlisted force to meet personnel requirements associated with diverse and changing missions. The DoD has established standards for aptitudes/abilities, medical conditions, and physical fitness to be used in selecting recruits who are most likely to succeed in their jobs and complete the first term of service (generally 36 months). In 1999, the Committee on the Youth Population and Military Recruitment was established by the National Research Council (NRC) in response to a request from the DoD. One focus of the committee's work was to examine trends in the youth population relative to the needs of the military and the standards used to screen applicants to meet these needs. When the committee began its work in 1999, the Army, the Navy, and the Air Force had recently

experienced recruiting shortfalls. By the early 2000s, all the Services were meeting their goals; however, in the first half of calendar year 2005, both the Army and the Marine Corps experienced recruiting difficulties and, in some months, shortfalls. When recruiting goals are not being met, scientific guidance is needed to inform policy decisions regarding the advisability of lowering standards and the impact of any change on training time and cost, job performance, attrition, and the health of the force. *Assessing Fitness for Military Enlistment* examines the current physical, medical, and mental health standards for military enlistment in light of (1) trends in the physical condition of the youth population; (2) medical advances for treating certain conditions, as well as knowledge of the typical course of chronic conditions as young people reach adulthood; (3) the role of basic training in physical conditioning; (4) the physical demands and working conditions of various jobs in today's military services; and (5) the measures that are used by the Services to characterize an individual's physical condition. The focus is on the enlistment of 18- to 24-year-olds and their first term of service. *Security Clearance Manual* is an indispensable guide for security clearance applicants, personnel security specialists and military recruiters. It provides detailed explanations of the investigative and adjudicative processes with step by step instructions for completing the security application form, tips on mitigating suitability issues and numerous case examples.
