***User Localization Strategies in the Face of Technological Breakdown Aug 22 2020* This book examines Ghana's use of the fingerprint biometric technology in order to further conversations about localization championed by technical communication scholars. Localization, in this case, refers to the extent to which users demonstrate their knowledge of use by subverting and reconfiguring the purpose of technology to solve local problems. Dorpenyo argues that the success of a technology depends on how it meets the users' needs and the creative efforts users put into use situations. In *User Localization Strategies in the Face of Technological Breakdown*, Dorpenyo advocates studying how users of technological systems construct knowledge about the technology and develop local strategies to solve technological breakdowns. By**

analyzing technical documents and interview transcripts, the author identifies and advances three user localization strategies: linguistic localization, subversive localization, and user-heuristic experience localization, and considers how biometric systems can become a tool of marginalization.

**Synthesis and Optimization of FPGA-Based Systems Apr
17 2020 The book is composed of two parts. The first part
introduces the concepts of the design of digital systems
using contemporary field-programmable gate arrays
(FPGAs). Various design techniques are discussed and
illustrated by examples. The operation and effectiveness
of these techniques is demonstrated through
experiments that use relatively cheap prototyping boards
that are widely available. The book begins with easily
understandable introductory sections, continues with
commonly used digital circuits, and then gradually
extends to more advanced topics. The advanced topics
include novel techniques where parallelism is applied
extensively. These techniques involve not only core
reconfigurable logical elements, but also use embedded
blocks such as memories and digital signal processing
slices and interactions with general-purpose and
application-specific computing systems. Fully
synthesizable specifications are provided in a hardware-
description language (VHDL) and are ready to be tested
and incorporated in engineering designs. A number of
practical applications are discussed from areas such as
data processing and vector-based computations (e.g.
Hamming weight counters/comparators). The second part
of the book covers the more theoretical aspects of finite**

state machine synthesis with the main objective of reducing basic FPGA resources, minimizing delays and achieving greater optimization of circuits and systems.

Listening Ear Trainer - User's Manual (v1.06) Jul 13 2022
To train your ear, one must learn to distinguish sounds. Acquiring Perfect Pitch requires in addition to remember pitches. In early childhood we collect the vast part of our relevant sound memory by imitating the sounds with our vocal cords. However, our brain doesn't stop there. At a later age we can still learn a new foreign language. Three new method's to acquire Absolute Pitch and Relative Pitch, supported by software feedback, are presented in this book. The first method, the Singing Funnel method, lets you acquire Absolute Pitch like a foreign language. The second method, the Octave Anchor Pithes method helps you to orientate yourself in the pitch realm. The last method, the Interval Overtone method, improves your interval hearing.
