Since its inception in 1997, the European Conference on Research and Advanced Technology for Digital Libraries (ECDL) has come a long way, creating a strong interdisciplinary community of researchers and practitioners in the field of digital libraries. We are proud to present the proceedings of ECDL 2005, the ninth conference in this series, which, following Pisa (1997), Heraklion (1998), Paris (1999), Lisbon (2000), Darmstadt (2001), Rome (2002), Trondheim (2003), and Bath (2004), took place on

September 18-23, 2005 in Vienna, Austria. ECDL 2005 featured separate calls for paper and poster submissions, resulting in 130 full papers and 32 posters being submitted to the conference. All papers were subject to a thorough peer-review process, with an 87-person-strong Program Committee and a further 68 additional reviewers from 35 countries from basically all continents sharing the tremendous review load, producing between three and four detailed reviews per paper. Based on these, as well as on the discussion that took place during a one-week on-line PC discussion phase, 41 papers were finally selected for inclusion in the conference program during a 1.5 day PC meeting, resulting in an acceptance rate of only 32%. Furthermore, 17 paper submissions were accepted for poster presentations with an additional 13 posters being accepted based on a simplified review process of 2-3 reviews per poster from the poster submission track. Both the full papers as well as extended abstracts of the posters presented at ECDL 2005 are provided in these proceedings. Schools, colleges, and universities around the world have swiftly switched to online delivery modes. Students are learning via new platforms and the use of narrated lectures, podcasts, online quizzes, and other e-learning materials has increased. Virtual

learning improves the educational experience, transforms teaching and learning, and provides rich, diverse, and flexible learning opportunities for the digital generation. It also makes students able to gain, share and verify knowledge through different sources such as social media communities, blogging, web-based content writing, video-based learning, etc. The main focus of "Redefining Virtual Teaching Learning Pedagogy" is to bring together leading academic scientists, researchers, and research scholars to exchange and share their experiences and results on all aspects of virtual learning and teaching. The chapters mainly focus on 6 critical areas of virtual teaching and learning: Curriculum and learning objectives Learning materials Pedagogic processes Classroom assessment frameworks Teacher support in the classrooms School leadership and management development. Audience Educators, researchers, academicians, entrepreneurs, and corporate professionals will gain knowledge and be updated about the role & future of virtual teaching and learning and the latest digital tools used for that purpose. The excitement of learning economics for the first time. The experience of a lifetime of teaching it. The Eighth Edition of Exploring Microeconomics captures the excitement of learning microeconomics for the first time through a lively and encouraging narrative that connects microeconomics to the world in a way that is familiar to readers. Author Robert L. Sexton draws on over 25 years of teaching experience to capture readers' attention, focusing on core concepts and expertly weaving in examples from current events and popular culture to make even classic economic principles modern and relatable. The text sticks to the basics and applies a thoughtful learning design, segmenting its presentation into brief, visually appealing, self-contained sections that are easier for readers to digest and retain compared to sprawling text. Thoughtfully placed section quizzes, interactive summaries, and problem sets help readers check their comprehension at regular intervals and develop the critical thinking skills that will allow them to "think like economists." Exploring Microeconomics will ignite readers' passion for the field and reveal its practical application in the world around them. Prepare students with a solid understanding of macroeconomic principles and how these principles affect their daily lives with Sexton's unique EXPLORING MACROECONOMICS, 7E. Rather than a traditional encyclopedic text filled with technical details, this book

offers a modern, back-to-basics approach designed to encourage economic literacy and help students appreciate how macroeconomics impacts life today. The latest edition of this reader-friendly book includes new learning tools, a visually appealing design, and the latest captivating content to encourage students to read and master the material. Packed with examples from current events and pop culture, **EXPLORING MACROECONOMICS** makes macroeconomic concepts less intimidating while conveying the real-world relevance of what students are learning. Throughout this course, the author shares and inspires in students the same excitement he felt when he took his first economics class. Practices associated with the culture of "scholarly" reading have been developed over many centuries and annotations themselves have become the subject of study, either as additional elements in connection with the original texts or as documents in their own right. The first "scholarly" reading techniques, seen historically from the 12th Century onwards, combine reading and writing in a process known as *lettrure*, involving both attentive reading and commentary. The Internet has transformed this activity, adding technical layers that relate both to the reading and writing process as well as to the circulation of texts; their potential and effective augmentation, diffusion, and reception. This book examines digitized reading and writing by focusing primarily on the conditions for the co-construction of scientific knowledge and its augmentation. The authors present numerous examples of studies and personal feedback concerning the intellectual process, open critical spaces, collaborative scholarly publishing, methods for the circulation and mediatization of knowledge, as well as the techniques and tools employed. Give students a solid understanding of economic principles and how these principles affect their daily lives with the unique **EXPLORING ECONOMICS, 7E**. Rather than a traditional encyclopedic text filled with technical details, this book offers a modern, back-to-basics approach designed to promote economic literacy and help students appreciate how economics impacts life. The latest edition of this reader-friendly book includes a visually appealing design and the latest captivating content to encourage students to read and master the material.
