During the past decade, rapid developments in information and communications technology have transformed key social, commercial and political realities. Within that same time period, working at something less than internet speed, much of the academic and policy debates arising from these new and emerging technologies have been fragmented. There have been few examples of interdisciplinary dialogue about the potential for anonymity and privacy in a networked society. Lessons from the Identity Trail fills that gap, and

examines key questions about anonymity, privacy and identity in an environment that increasingly automates the collection of personal information and uses surveillance to reduce corporate and security risks. This project has been informed by the results of a multi-million dollar research project that has brought together a distinguished array of philosophers, ethicists, feminists, cognitive scientists, lawyers, cryptographers, engineers, policy analysts, government policy makers and privacy experts. Working collaboratively over a four-year period and participating in an iterative process designed to maximize the potential for interdisciplinary discussion and feedback through a series of workshops and peer review, the authors have integrated crucial public policy themes with the most recent research outcomes. In arbitral proceedings, objections and challenges related to arbitrators' conflicts of interest can readily escalate into acrimony. Moreover, the alleged fear of bias has

engendered a veritable jungle of rules and guidelines, complicating and even undermining the process. In this book's innovative approach to this thorny subject, prominent specialists representing three stakeholding groups—users, institutions, and state courts—impart firsthand information on their respective practices and policies concerning arbitration, and then proceed to recommend promising paths to harmonizing guidelines and establishing clear and reasonable criteria. Drawing on papers presented at a conference sponsored by the Swiss Arbitration Association (ASA), the contributions respond in depth to such questions as the following: How much independence and impartiality do users seek? What are users expecting and to what extent do expectations differ with regard to the users' own arbitrator, the arbitrator appointed by the opponent, and the chairperson? In what ways can party-appointed arbitrators impact independence and impartiality? When and why should an arbitrator

be challenged? How much uniformity exists among the various sets of institutional rules and guidelines, relating in particular to the constitution of the arbitral tribunal? Contributors come from a representative range of major commercial jurisdictions, including England, France, Germany, Singapore, Switzerland, and the United States. With its deeply informed, practice-based views from users, arbitral institutions, major jurisdictions, and practitioners, this remarkably thorough overview of arbitrators' conflicts of interest will facilitate informed choice of jurisdictions and arbitral institutions for users and assist arbitrators in ascertaining their disclosure obligations. It will be highly valued by corporate counsel, arbitral institutions, arbitrators, judges, and academics interested in international arbitration.
