TRY (FREE for 14 days), OR RENT this title: www.wileystudentchoice.com Realizing the importance of accounting information systems and internal controls in today's business environment, the updated 3rd edition of Accounting Information Systems makes the world of systems and controls accessible to today's student. It enhances opportunities for learning about AIS and its day-to-day operation and is written for the business or accounting major required to take an AIS course. Keeping the student in mind, this text focuses on the business processes and the related controls, as well as the essential topics of ethics and corporate governance. This well-known text provides students with the knowledge of information systems needed to begin their accounting careers. It emphasizes systems as an accounting discipline while providing technological competence. It teaches from an accounting, rather than a MIS, perspective. Provides balanced coverage of systems, EDP Controls, and auditing of systems. Modular approach allows for teaching flexibility. This text provides thorough coverage of accounting information systems and related technologies. It features an early presentation of transaction cycles plus a special emphasis on ethics, fraud, and the modern manufacturing environment. Accounting Information systems (AIS) have become indispensable in the field, and this book provides clear guidance for students or professionals needing to get up to speed. Designed to suit a one-semester AIS course at the graduate, undergraduate, or community college level, Core Concepts of Accounting Information Systems explores AIS use and processes in the context of modern-day accounting. Coverage includes conceptual overviews of data analytics, accounting, and risk management, as well as detailed discussion of business processes, cybercrime, database design and more to provide a well-rounded introduction to AIS. Case studies reinforce fundamental concepts using real-world scenarios that encourage critical thinking, while AIS-at-Work examples illustrate complex procedures or concepts in everyday workplace situations. Test Yourself questions allow students to gauge their level of understanding, while End of Chapter questions stimulate application of new skills through problems, cases, and discussion questions that facilitate classroom dialogue. Practical, current, relevant, and grounded in everyday application, this book is an invaluable resource for students of managerial accounting, tax accounting, and compliance. This is the second book of selected papers on environmental management accounting (EMA) which has been developed for Kluwer by the Environmental Management

Accounting Network - Europe (EMAN-Eu), drawn primarily from papers presented at EMAN-Eu, to bring together several examples of leading thinking and practice internationally in this rapidly developing area. The authors include academics, practitioners from industry, and government policy-makers, and the subjects covered range from individual company experiences to the role of government in promoting EMA in industry. The papers included in the book provide several examples of how EMA can be applied in practice both in large corporations and in small and medium-sized enterprises, and of reports on the extent of the implementation of EMA and the conditions which encourage this. The book is intended for all those interested in EMA as either researchers or practitioners. It will also be of interest both to those interested in how well-established management accounting methods can be adapted and extended in order to meet new demands on companies, and also to environmental managers interested in learning how accounting techniques can be of value in achieving environmental management objectives. The recent financial crisis has made this skill even more crucial to the business community. As a result of this recent crisis and of the financial statement accounting scandals that occurred at the turn of the century, understanding the auditor's responsibility related to fraud, maintaining a clear perspective, probing for details, and understanding the big picture are indispensable to effective auditing. The author team of Louwers, Ramsay, Sinason, Strawser, and Thibodeau has dedicated years of experience in the auditing field to this new edition of Auditing & Assurance Services, supplying the necessary investigative tools for future auditors. A business focused introduction to Accounting for all students - not just those intending to be Accounting majors. Lead students through the real-world business cycle and how accounting information informs decision-making. Students learn how to base decisions on two kinds of accounting information - managerial and financial. Departing from the traditional approach taken by other introductory accounting textbooks, students apply both managerial and financial approaches within the topics examined in each chapter. The conversational writing engages students in the theoretical content and how it applies to contemporary real-world scenarios. The new edition updates includes the fully integrated Cafe Revive case study. Students follow a retail coffee business through the book to learn about applying accounting issues in the real world. The book introduces pragmatic constructivism as a paradigm for understanding actors' construction of functioning practice and for developing methods and concepts for managing and observing that practice. The book explores, understands and theorises organisational practices as constructed through the activities of all organisational actors. Actors always act under presumptions of a specific actor-world-relation which they continuously construct, adjust and reconstruct in light of new experiences, contexts and communication. The outcome of the actor-world-relation is a reality construction. The reality construction may function successfully or it may be hampered by fictitious and illusionary elements, due to missing or faulty actor-world relations. The thesis is that four dimensions of reality - facts, possibilities, values and communication - must be integrated in the actor-world-relation if the construct is to form a successful basis for effective, functioning actions. Drawing on pragmatic constructivism, the book provides concepts and ideas for studies regarding actors and their use of management accounting models in their construction of organized reality. It concentrates on researching and conceptualizing what creates functioning reality construction. It develops concept and methods for understanding, analysing and managing the actors' reality constructions. It is intended for people who do research on or work actively with developing management accounting. This text focuses on providing skills necessary for a foundation in enterprise risk

management, particularly as these risks pertain to information systems and relevant business processes. The aim of this book is to teach accounting information systems from an AIS rather than an MIS perspective. The book has a modular organization and is designed for both undergraduate and graduate AIS classes. The accounting implications of recent technological changes are explored, including an explanation of electronic data interchange. It uses CASE tools as illustrations, and discusses rapid application development, user interface design, and object-orientated methodologies. Also introduced are data base design methods, and questions and exercises on each topic. Never HIGHLIGHT a Book Again!
